

Aeronautical Information Services

Presented to: ATIEC Conference

By: Abigail Smith

Date: September 2016

Aviation Information World – Forecasting the Future

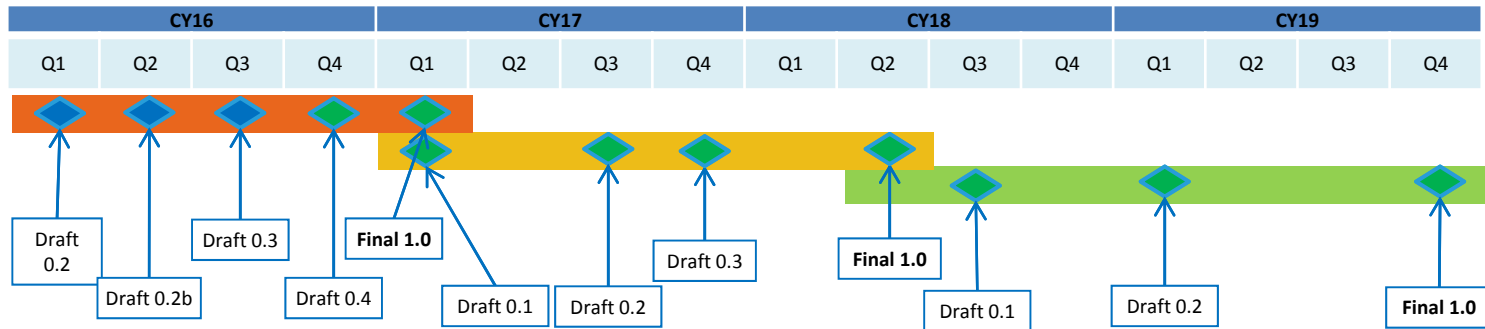

Scope

- **Information services will replace point-to-point message exchange**
 - Makes available rich information content to a variety of ATM users
- **An information service is described in the SWIM Manual (Doc 10039) as providing information consumers access to one or more applications or systems by means of SWIM core services**
 - Support the exchange of flight, flow, aeronautical, and meteorological information
- **The focus of the Information Services Working Group is to:**
 - Develop an Information Services Concept of Operations (ConOps)
 - Develop guidance material on the description of services
 - Provide update material towards the Standards and Recommended Practices (SARPs)

Information Services Timeline

Recent Accomplishments

- **ConOps**
 - Held Drafting sessions in February and June
 - Provided Drafts 0.2, 0.2b, and 0.3 for open review and comment collection
- **Service Description**
 - Provided draft service description for review and comments
 - Populated revised service description template with examples from Flight, Weather, and Aeronautical Information Services
- **SWIM Manual**
 - Identified the sections of the ConOps that will be translated over to the SWIM Manual
 - Began to align the ConOps sections to the appropriate sections of the SWIM Manual
- **SARPs**
 - Began discussion to filter which SARPs will be effected by Information Services work
